

# Datasheet for ABIN101286 Goat anti-Guinea Pig IgG (Heavy & Light Chain) Antibody (TRITC) - Preadsorbed

Overview

Quantity:	1 mg
Target:	IgG
Binding Specificity:	Heavy & Light Chain
Reactivity:	Guinea Pig
Host:	Goat
Clonality:	Polyclonal
Conjugate:	TRITC
Application:	Flow Cytometry (FACS), FLISA, Fluorescence Microscopy (FM)

### Product Details

Immunogen:	Immunogen: Guinea Pig IgG whole molecule
Isotype:	IgG
Specificity:	IgG (H&L)
Characteristics:	Concentration Definition: by UV absorbance at 280 nm
Purification:	Preadsorption: Solid phase absorption

## Target Details

Target:	lgG
Abstract:	IgG Products
Target Type:	Antibody

#### Target Details

Background:

Synonyms: goat Anti-Guinea Pig IgG Antibody rhodamine Conjugation, goat Anti-Guinea Pig IgG TRITC Conjugated antibody

Background: Anti-Guinea Pig IgG Rhodamine Antibody generated in goat detects guinea pig IgG. Secreted as part of the adaptive immune response by plasma B cells, immunoglobulin G constitutes 75 % of serum immunoglobulins. Immunoglobulin G binds to viruses, bacteria, as well as fungi and facilitates their destruction or neutralization via agglutination (and thereby immobilizing them), activation of the compliment cascade, and opsinization for phagocytosis. The whole IgG molecule possesses both the F(c) region, recognized by high-affinity Fc receptor proteins, as well as the F(ab) region possessing the epitope-recognition site. Both heavy and light chains of the antibody molecule are present. Secondary Antibodies are available in a variety of formats and conjugate types. When choosing a secondary antibody product, consideration must be given to species and immunoglobulin specificity, conjugate type, fragment and chain specificity, level of cross-reactivity, and host-species source and fragment composition.

### Application Details

Application Notes:	Application Note: This product is designed for immunofluorescence microscopy, fluorescence based plate assays (FLISA) and fluorescent western blotting. This product is also suitable for multiplex analysis, including multicolor imaging, utilizing various commercial platforms. FLISA Dilution: 1:10,000 - 1:50,000 Flow Cytometry Dilution: 1:500 - 1:2,500
Restrictions:	IF Microscopy Dilution: 1:1,000 - 1:5,000 For Research Use only
Handling	
Format:	Lyophilized
Format: Reconstitution:	Lyophilized Reconstitution Volume: 1.0 mL Reconstitution Buffer: Restore with deionized water (or equivalent)
	Reconstitution Volume: 1.0 mL
Reconstitution:	Reconstitution Volume: 1.0 mL Reconstitution Buffer: Restore with deionized water (or equivalent)
Reconstitution: Concentration:	Reconstitution Volume: 1.0 mL Reconstitution Buffer: Restore with deionized water (or equivalent) 1.0 mg/mL
