Target Details

Background:	Synonyms: goat Anti-Guinea Pig IgG F(ab')2 Antibody Rhodamine Conjugated, goat Anti-Guinea Pig IgG Fab2 Fragment Antibody TRITC Conjugated Background: Anti-Guinea Pig IgG F(ab')2 Rhodamine Antibody generated in goat is a proteolytic fragment of immunoglobulin G (IgG) obtained by limited digestion with the enzyme pepsin under controlled conditions of temperature, time and pH . F(ab')2 Molecules lack the Fc portion of IgG and therefore receptors that bind Guinea Pig IgG F(c) will not bind Guinea Pig IgG F(ab')2 Molecules. Secondary Antibodies are available in a variety of formats and conjugate types. When choosing a secondary antibody product, consideration must be given to species and immunoglobulin specificity, conjugate type, fragment and chain specificity, level of cross-reactivity, and host-species source and fragment composition.
