Target Details

Target Type:	Antibody
Background:	Synonyms: rabbit Anti-Guinea Pig IgG F(ab')2 Antibody Fluorescein Conjugated, rabbit Anti-
	Guinea Pig IgG Fab2 Fragment Antibody FITC Conjugated
	Background: Anti-Guinea Pig IgG F(ab')2 Fluorescein Antibody generated in rabbit is a
	proteolytic fragment of immunoglobulin G (IgG) obtained by limited digestion with the enzyme
	pepsin under controlled conditions of temperature, time and pH . F(ab')2 Molecules lack the Fc
	portion of IgG and therefore receptors that bind Guinea Pig IgG $F(c)$ will not bind Guinea Pig IgG
	F(ab')2 Molecules. Secondary Antibodies are available in a variety of formats and conjugate
	types. When choosing a secondary antibody product, consideration must be given to species
	and immunoglobulin specificity, conjugate type, fragment and chain specificity, level of cross-
	reactivity, and host-species source and fragment composition.
