	interactor of torsinA, KLHL14, KIAA1384 Background: KLHL14 is a member of the KLHL family. The kelch motif was initially discovered in Kelch. In this protein there are six copies of the motif. It has been shown for one member that it is related to Galactose Oxidase for which a structure has been solved. Two isoforms of this protein exist - 70 kDa and 43 kDa.
