Background:

Synonyms: Chicken Anti Rat IgG Biotin Conjugated Antibody, Chicken Anti-Rat IgG Antibody Biotin Conjugation

Background: Anti-Rat IgG (H&L) generated in chicken detects rat Immunoglobulin G. Both the Heavy and Light chains of the antibody molecule are present. Representing approximately 75 % of serum immunoglobulins, IgG is the most abundant antibody isotype found in the circulation. IgG molecules are synthesized and secreted by plasma B cells. Secondary Antibodies are available in a variety of formats and conjugate types. When choosing a secondary antibody product, consideration must be given to species and immunoglobulin specificity, conjugate type, fragment and chain specificity, level of cross-reactivity, and host-species source and fragment composition. This anti-rat IgG is conjugated to biotin.

Application Details

Application Notes:	Immunohistochemistry Dilution: 1:1,000 - 1:5,000
	Application Note: This product has been assayed against 1.0 μg of Rat IgG in a standard
	capture ELISA using Peroxidase Conjugated Streptavidin #S000-03 and ABTS (2,2'-azino-bis-[3-
	ethylbenthiazoline-6-sulfonic acid]) code # ABTS-100 as a substrate for 30 minutes at room
	temperature. A working dilution of 1:4,000 to 1:20,000 of the reconstitution concentration is
	suggested for this product.
