## Target Details

Target Type:	Antibody
Background:	Synonyms: Donkey Anti-Rat IgG fluorescein Conjugated Antibody, Donkey Anti-Rat IgG Antibody
	FITC Conjugation
	Background: Anti-Rat IgG (H&L) Fluorescein Antibody generated in donkey detects reactivity to
	Rat IgG. Secreted as part of the adaptive immune response by plasma B cells, immunoglobulin
	G constitutes 75 % of serum immunoglobulins. Immunoglobulin G binds to viruses, bacteria, as
	well as fungi and facilitates their destruction or neutralization via agglutination (and thereby
	immobilizing them), activation of the compliment cascade, and opsinization for phagocytosis.
	The whole IgG molecule possesses both the F(c) region, recognized by high-affinity Fc receptor
	proteins, as well as the F(ab) region possessing the epitope-recognition site. Both the Heavy
	and Light chains of the antibody molecule are present. Secondary Antibodies are available in a
	variety of formats and conjugate types. When choosing a secondary antibody product,
	consideration must be given to species and immunoglobulin specificity, conjugate type,
	fragment and chain specificity, level of cross-reactivity, and host-species source and fragment
	composition. This Anti-Rat IgG is conjugated to Fluorescein.
