## Target Details

Target Type:	Antibody
Background:	Synonyms: Sheep Anti-Rat IgG alkaline phosphatase Conjugated Antibody, Sheep Anti-Rat IgG
	Antibody alk phos Conjugation
	Background: Anti-Rat IgG (H&L) generated in sheep detects rat Immunoglobulin G. Both the
	Heavy and Light chains of the antibody molecule are present. Representing approximately 75 $\%$
	of serum immunoglobulins, IgG is the most abundant antibody isotype found in the circulation.
	IgG molecules are synthesized and secreted by plasma B cells. Secondary Antibodies are
	available in a variety of formats and conjugate types. When choosing a secondary antibody
	product, consideration must be given to species and immunoglobulin specificity, conjugate
	type, fragment and chain specificity, level of cross-reactivity, and host-species source and
	fragment composition. This Anti-Rat IgG is conjugated to alkaline phosphatase.

Handling Advice:	Do not freeze! Freezing alkaline phosphatase conjugates will result in a substantial loss of
	enzymatic activity.
	Do not add Sodium azide.
	Dilute only prior to immediate use
	Each reagent is stable for the period shown on the bottle label if stored as directed.
