## **Target Details**

Background:	Synonyms: Rabbit Anti-Sheep IgG rhodamine Conjugated Antibody, Rabbit Anti-Sheep IgG
	Antibody TRITC Conjugation
	Background: Anti-Sheep IgG (H&L) Rhodamine Antibody generated in rabbit detects reactivity to
	sheep IgG. Secreted as part of the adaptive immune response by plasma B cells,
	immunoglobulin G constitutes 75 % of serum immunoglobulins. Immunoglobulin G binds to
	viruses, bacteria, as well as fungi and facilitates their destruction or neutralization via
	agglutination (and thereby immobilizing them), activation of the compliment cascade, and
	opsinization for phagocytosis. The whole IgG molecule possesses both the F(c) region,
	recognized by high-affinity Fc receptor proteins, as well as the F(ab) region possessing the
	epitope-recognition site. Both the Heavy and Light chains of the antibody molecule are present.
	Secondary Antibodies are available in a variety of formats and conjugate types. When choosing
	a secondary antibody product, consideration must be given to species and immunoglobulin
	specificity, conjugate type, fragment and chain specificity, level of cross-reactivity, and host-
	species source and fragment composition. This Anti-Sheep IgG Antibody is conjugated to
	Rhodamine.
