Target Details

Background:	Synonyms: Rabbit Anti-Rat IgM (mu chain) Antibody rhodamine Conjugated, Rabbit Anti-Rat
	IgM mu Antibody TRITC Conjugation
	Background: Anti-Rat IgM antibody generated in rabbit specifically detects rat IgM heavy chain
	Immunoglobulin M is the largest antibody isotype and the first to be secreted against an initial
	exposure to antigen. IgM is predominantly produced in the spleen. Formed from covalently
	linking 5 immunoglobulins together, the approximate molecular weight of IgM is 900 kDa and
	possesses 10 binding sites (though due to the size of most antigens, not all sites are capable of
	binding at once). Due to this large size, IgM is typically isolated to the serum. Anti-Rat IgM
	antibody is ideal for investigators in Immunology, Microbiology, and Cell Biology. This Anti-Rat
	IgM antibody is conjugated to rhodamine.
