Target Details

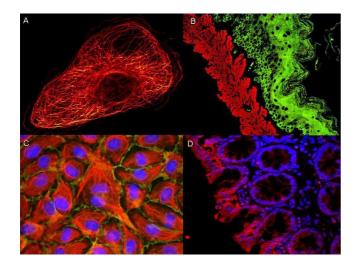

Target:	lgG
Abstract:	IgG Products
Target Type:	Antibody
Background:	Synonyms: rabbit anti-Goat IgG ATTO 488 Conjugated Antibody, rabbit anti-Goat IgG Antibody
	ATTO488 Conjugation
	Background: Anti-Goat IgG ATTO dye Antibody generated in rabbit detects goat IgG. Secreted
	as part of the adaptive immune response by plasma B cells, immunoglobulin G constitutes
	75 % of serum immunoglobulins. Immunoglobulin G binds to viruses, bacteria, as well as fungi
	and facilitates their destruction or neutralization via agglutination (and thereby immobilizing
	them), activation of the compliment cascade, and opsinization for phagocytosis. The whole IgG
	molecule possesses both the F(c) region, recognized by high-affinity Fc receptor proteins, as
	well as the F(ab) region possessing the epitope-recognition site. Both heavy and light chains of
	the antibody molecule are present.
Application Details	
Application Notes:	Application Note: GOAT IgG (H&L) conjugated to ATTO 488 is designed for STED microscopy,
	FRET, immunofluorescence microscopy, fluorescence based plate assays (FLISA) and
	fluorescent western blotting. This product is also suitable for multiplex analysis, including
	multicolor imaging, utilizing various commercial platforms. The emission spectra for this ATTO
	conjugate matches the principle output wavelengths of most common fluorescence
	instrumentation.
	FLISA Dilution: >1:20,000
	Western Blot Dilution: >1:10,000
	IF Microscopy Dilution: >1:5,000
Comment:	The emission spectra for this ATTO conjugate matches the principle output wavelengths of
	most common fluorescence instrumentation.
