## Target Details

Background:	<p>Synonyms: Donkey Fab Anti-Rabbit IgG Antibody, Donkey Fab Fragment Anti-Rabbit IgG Antibody</p> <p>Background: Fab Anti-Rabbit IgG (H&amp;L) Antibody generated in donkey detects immunoglobulin g from rabbit, both heavy and light chains of the antibody molecule are present. Each IgG has two antigen binding sites. Representing approximately 75 % of serum immunoglobulins, IgG is the most abundant antibody isotype found in the circulation. IgG molecules are synthesized and secreted by plasma B cells. Secondary Antibodies are available in a variety of formats and conjugate types. When choosing a secondary antibody product, consideration must be given to species and immunoglobulin specificity, conjugate type, fragment and chain specificity, level of cross-reactivity, and host-species source and fragment composition.</p>
