Target Details

Target:	RPL36AL	
Alternative Name:	RPL36AL (RPL36AL Products)	
Background:	Background: Cytoplasmic ribosomes, organelles that catalyze protein synthesis, consist of a	
	small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA	

species and approximately 80 structurally distinct proteins. RPL36A is a ribosomal protein that is a component of the 60S subunit. It shares sequence similarity with yeast ribosomal protein L44 and belongs to the L44E (L36AE) family of ribosomal proteins. Although this gene has been referred to as ribosomal protein L44 (RPL44), its official name is ribosomal protein L36a (RPL36A). RPL36A and the human gene officially named ribosomal protein L36a-like (RPL36AL) encode nearly identical proteins, however, they are distinct genes. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome.

Aliases: RPL36AL antibody, 60S ribosomal protein L36a-like antibody, Large ribosomal subunit protein eL42-like antibody
