IGF2R Protein (AA 2328-2491, partial) (GST tag)

1 Image

3 Publications

Overview

Quantity:	100 µg
Target:	IGF2R
Protein Characteristics:	AA 2328-2491, partial
Origin:	Human
Source:	Escherichia coli (E. coli)
Protein Type:	Recombinant
Purification tag / Conjugate:	This IGF2R protein is labelled with GST tag.
Application:	ELISA

Product Details

Sequence:	KKERRETVIS KLTTCCRRSS NVSYKYSKVN KEEETDENET EWLMEEIQLP PPRQGKEGQE NGHITTKSVK ALSSLHGDDQ DSEDEVLTIPEVKVHSGRGA GAESSHPVRN AQSNALQERE DDRVGLVRGE KARKGKSSSA QKQTVSSTKL VSFHDDSDDED LLHI
Characteristics:	Please inquire if you are interested in this recombinant protein expressed in E. coli, mammalian cells or by baculovirus infection. Be aware about differences in price and lead time.
Purity:	90 %

Target Details

Target:	IGF2R
Alternative Name:	Cation-independent mannose-6-phosphate receptor protein (IGF2R Products)
Background:	Transport of phosphorylated lysosomal enzymes from the Golgi complex and the cell surface

Target Details

to lysosomes. Lysosomal enzymes bearing phosphomannosyl residues bind specifically to mannose-6-phosphate receptors in the Golgi apparatus and the resulting receptor-ligand complex is transported to an acidic prelysosomal compartment where the low pH mediates the dissociation of the complex. This receptor also binds IGF2. Acts as a positive regulator of T-cell coactivation, by binding DPP4.

Molecular Weight: 45.7 kD

UniProt: [P20645](#)

Application Details

Comment: The yeast protein expression system is the most economical and efficient eukaryotic system for secretion and intracellular expression. A protein expressed by the mammalian cell system is of very high-quality and close to the natural protein. But the low expression level, the high cost of medium and the culture conditions restrict the promotion of mammalian cell expression systems. The yeast protein expression system serve as a eukaryotic system integrate the advantages of the mammalian cell expression system. A protein expressed by yeast system could be modified such as glycosylation, acylation, phosphorylation and so on to ensure the native protein conformation. It can be used to produce protein material with high added value that is very close to the natural protein. Our proteins produced by yeast expression system has been used as raw materials for downstream preparation of monoclonal antibodies.

Restrictions: For Research Use only

Handling

Format: Lyophilized

Concentration: 0.2-2 mg/mL

Buffer: Tris-based buffer, 50 % glycerol

Handling Advice: Repeated freezing and thawing is not recommended. Store working aliquots at 4 °C for up to one week

Storage: -20 °C

Storage Comment: Store at -20 °C for extended storage, conserve at -20 °C or -80 °C
