Target Details

Target:	Kallikrein 6 (KLK6)
Alternative Name:	neurosin (KLK6 Products)
Sub Type:	Fusionprotein
Background:	Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many Kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. This gene is one of the fifteen Kallikrein subfamily members located in a cluster on chromosome 19. Its encoded protein is secreted and may play a role in suppression of tumorigenesis in breast and prostate cancers. Alternate splicing of this gene results in multiple transcript variants encoding the same protein. Alternative Names: Kallikrein-6, Neurosin, Protease M, SP59, Serine Protease 18, Serine Protease 9, Zyme, KLK6, PRSS18, PRSS9
Molecular Weight:	26.17 kDa
UniProt:	Q92876
Pathways:	Complement System, Regulation of G-Protein Coupled Receptor Protein Signaling
