## Target Details

Target:	Netrin 1 (NTN1)
Alternative Name:	Netrin-1 ( <a href="#">NTN1 Products</a> )

## Target Details

Background:	Netrin-1 controls guidance of CNS commissural axons and peripheral motor axons. Its association with either DCC or some UNC5 receptors will lead to axon attraction or repulsion, respectively. It also serve as a survival factor via its association with its receptors which prevent the initiation of apoptosis. Netrin-1 is also Involved in tumorigenesis by regulating apoptosis. Netrin-1 promotes atherosclerosis by retaining macrophages in the artery wall. Netrin-1 also governs induced pluripotent stem cell (iPS) formation and improves reprogramming efficiency of human and mouse somatic cells by limiting apoptosis mediated by Netrin-1 receptors DCC or UNC5b.
Molecular Weight:	~80kDa (SDS-PAGE)
UniProt:	<a href="#">O95631</a>
Pathways:	<a href="#">Regulation of Cell Size</a>

## Application Details

Application Notes:	Optimal working dilution should be determined by the investigator.
Comment:	Induces pluripotent stem cell (iPS) formation and improves reprogramming efficiency of human and mouse somatic cells by inhibiting apoptosis mediated by the receptors DCC or UNC5B (at 150ng /ml). Induces axon outgrowth.
