Target Details

Alternative Name:	Hepatitis C Virus NS4B (HCV NS4b Products)
Target Type:	Viral Protein
Background:	<p>Synonyms: HCV, HCV NS4B, Non structural protein 4B, NS4B, p27.</p> <p>Background: HCV is a positive, single-stranded RNA virus in the Flaviviridae family. The genome is approximately 10,000 nucleotides and encodes a single polyprotein of about 3,000 amino acids. The polyprotein is processed by host cell and viral proteases into three major structural proteins and several non-structural protein necessary for viral replication. NS4B induces a specific membrane alteration that serves as a scaffold for the virus replication complex. This membrane alteration gives rise to the so-called ER-derived membranous web that contains the replication complex.</p>
