Target Details

Background:	<p>Synonyms: ZNF786, DKFZp762I137, Zinc finger protein 786, ZNF786, ZN786_HUMAN.</p> <p>Background: Zinc-finger proteins contain DNA-binding domains and have a wide variety of functions, most of which encompass some form of transcriptional activation or repression. The majority of zinc-finger proteins contain a Kr_ppel-type DNA binding domain and a KRAB domain, which is thought to interact with KAP1, thereby recruiting histone modifying proteins.</p> <p>ZNF786 (zinc finger protein 786) is a 782 amino acid protein that belongs to the Kr_ppel C2H2-type zinc-finger protein family and is thought to function in transcriptional regulation. Localizing to nucleus, ZNF786 contains sixteen C2H2-type zinc fingers, a single KRAB domain and is encoded by a gene that maps to human chromosome 7q36.1.</p>
