Target Details		
Background:	Synonyms: ATX3L_HUMAN, ATXN3L, Machado-Joseph disease protein 1-like, MJDL, Putative ataxin-3-like protein.	
	Background: Defects in ATXN3 are the cause of spinocerebellar ataxia type 3 (SCA3) , also	
	known as Machado-Joseph disease (MJD). Spinocerebellar ataxia is a clinically and genetically	
	heterogeneous group of cerebellar disorders. Patients show progressive incoordination of gait	
	and often poor coordination of hands, speech and eye movements, due to degeneration of the	
	cerebellum with variable involvement of the brainstem and spinal cord. SCA3 belongs to the	
	autosomal dominant cerebellar ataxias type I (ADCA I) which are characterized by cerebellar	
	ataxia in combination with additional clinical features like optic atrophy, ophthalmoplegia,	
	bulbar and extrapyramidal signs, peripheral neuropathy and dementia. The molecular defect in	
	SCA3 is the a CAG repeat expansion in ATXN3 coding region. Longer expansions result in	
	earlier onset and more severe clinical manifestations of the disease.
