Target Details

Alternative Name:	NSF (NSF Products)
Background:	Synonyms: N ethylmaleimide sensitive factor, N ethylmaleimide sensitive factor, N ethylmaleimide sensitive factor like protein, N ethylmaleimide sensitive fusion protein, N ethylmaleimide sensitive fusion protein, N-ethylmaleimide-sensitive fusion protein, NEM sensitive fusion protein, NEM sensitive fusion protein, NEM-sensitive fusion protein, NSF, NSF_HUMAN, SKD 2, SKD2, SKD2, Vesicle fusing ATPase, Vesicle fusing ATPase, Vesicle-fusing ATPase, Vesicular fusion protein NSF, Vesicular fusion protein NSF, Vesicular-fusion protein NSF. Background: Several protein-protein interactions are essential to membrane fusion during endocytosis. Membrane fusion requires interaction among SNARE1 proteins associated with both donor and acceptor membranes (1,2). Following membrane fusion, the -SNAP cytoplasmic adapter protein binds to the SNARE complex. N-ethylmaleimide-sensitive factor (NSF), a hexameric ATPase, then associates with the -SNAP/SNARE complex to mediate SNARE disassembly during membrane fusion (3,4). The ATPase activity of NSF induces a conformational change in the -SNAP/SNARE complex that leads to its dissociation from the membrane, membrane fusion and eventual recycling of the SNARE complex for subsequent membrane fusion (3,4).
