Background:	Synonyms: Janusin, Restrictin, TenascinR, Tenascin-R, Tenascin R restrictin, janusin, Tenascin-
	R, TENR_HUMAN, TN-R, Tnr.
	Background: The Tenascin family of extracellular matrix proteins includes Tenascin (also
	designated cytotactin or Tenascin-C), Tenascin-R (also designated Restrictin or Janusin) and
	Tenascin-X. Tenascin proteins function as substrate-adhesion molecules (SAMs) and are
	involved in regulating numerous developmental processes, such as morphogenetic cell
	migration and organogenesis. The Tenascin family proteins arise from various splicing events
	in the region of coding for FNIII repeats. Tenascin and Tenascin-X are expressed in several
	tissues during embryogenesis, and in adult tissues undergoing active remodel-ing such as
	healing wounds and tumors. Tenascin-R (TN-R) is expressed on the surface of neurons and
	glial cells.
