Pathways:	Regulation of Leukocyte Mediated Immunity, Production of Molecular Mediator of Immune
UniProt:	Q8TD43
Gene ID:	54795
	Enhances cell proliferation through up-regulation of the beta-catenin signaling pathway.
	production through differential regulation of calcium signaling and NFATC1 localization.

	May also be involved in pacemaking or could cause irregular electrical activity under conditions
	myogenic constriction of cerebral arteries. Controls insulin secretion in pancreatic beta-cells.
	lymphocyte activation, which is required for NFAT-dependent IL2 production. Involved in
	hair cells etc. Participates in T-cell activation by modulating Ca(2+) oscillations after T

	the membrane. It thereby plays a central role in cadiomyocytes, neurons from entorhinal cortex,
	Mediates transport of monovalent cations (Na(+) > K(+) > Cs(+) > Li(+)), leading to depolarize
	depolarization. While it is activated by increase in intracellular Ca(2+), it is impermeable to it.
