	TMEM142B, Transmembrane protein 142B.
	Background: Orai2 is a 254 amino acid multi-pass membrane protein that belongs to the orai
	family of proteins. Localizing to the plasma membrane, Orai2 plays an important role in store-
	operated calcium (SOC) entry, a process involving Ca2+ influx and replenishment of Ca2+
	stores formerly emptied through the action of inositol 1,4,5-trisphosphate production and other
	Ca2+ mobilizing agents. CRAC channels are responsible for medi-ating calcium influx in T-cells
	and play an important role in the immune response. Orai2 specifically increases the Ca2+-
	selective current through coaction with the Ca2+ sensor Stim1.
