| | makes up nearly 3 % of human cellular DNA and is associated with a variety of genetic |
|----------|--|
| | disorders. The GAN gene is located on chromosome 16 and, with mutation, may lead to giant |
| | axonal neuropathy, a nervous system disorder characterized by increasing malfunction with |
| | growth. The rare disorder Rubinstein-Taybi syndrome is also associated with chromosome 16, |
| | though through the CREBBP gene which encodes a critical CREB binding protein. Signs of |
| | Rubinstein-Taybi include mental retardation and predisposition to tumor growth and white |
| | blood cell neoplasias. Crohn's disease is a gastrointestinal inflammatory condition associated |
| | with chromosome 16 through the NOD2 gene. An association with systemic lupus |
| | erythematosis and a number of other autoimmune disorders with the pericentromeric region of |
| | chromosome 16 has led to the identification of SLC5A11 as a potential autoimmune modifier. |
| | The FAM96B gene product has been provisionally designated FAM96B pending further |
| | characterization. |
