Target Details	
Alternative Name:	HAGHL (HAGHL Products)
Background:	Synonyms: HAGHL, HAGHL_HUMAN, Hydroxyacylglutathione hydrolase-like,
	Hydroxyacylglutathione hydrolase-like protein.
	Background: The hydroxyacylglutathione hydrolase-like protein (HAGHL) is a 290 amino acid
	protein that belongs to the glyoxalase II family. HAGHL binds two zinc ions per subunit and acts
	as a hydrolase on ester bonds. The gene encoding HAGHL maps to human chromosome 16,
	which encodes over 900 genes in approximately 90 million base pairs, makes up nearly 3 % of
	human cellular DNA and is associated with a variety of genetic disorders. The rare disorder
	Rubinstein-Taybi syndrome is associated with chromosome 16, as is Crohn's disease, a
	gastrointestinal inflammatory condition that may involve the NOD2 gene. An association with
	systemic lupus erythematosis and a number of other autoimmune disorders with the
	pericentromeric region of chromosome 16 has led to the identification of SLC5A11 as a
	potential autoimmune modifier.
