| Background: | <p>Synonyms: FAM 84A, Family with sequence similarity 84 member A, family with sequence similarity 84, member A, FLJ35392, Neurologic sensory protein 1, Neurological/sensory 1, NSE 1, NSE1, PP11517, Protein FAM84A, Protein NSE1.</p> <p>Background: FAM84A is a 292 amino acid protein that belongs to the FAM84 family of proteins. Predominantly expressed in testis, FAM84A shares 44 % amino acid identity with the related protein FAM84B. FAM84A localizes to a subcellular membrane region where there is no contact between neighboring cells and is believed to play a role in cell morphology and motility. More specifically, the expression of FAM84A increases cell motility. Two FAM84A isoforms are expressed due to alternative splicing events. Isoform 2 can be phosphorylated on various serine residues and this phosphorylation is associated with cellular morphology. FAM84A is upregulated in colorectal cancer, lung cancer, pancreatic cancer, cholangiocarcinoma and bladder cancer tissues. Via its ability to increase cell motility, FAM84A may contribute to the invasion and metastasis of cancer cells.</p> |
