## Target Details

Background:	Synonyms: FAM 98A, Family with sequence similarity 98 member A, Hypothetical protein
	LOC25940, LOC25940, Protein FAM98A, FA98A_HUMAN.
	Background: Encoding more than 700 genes, chromosome 15 is made up of approximately 106
	million base pairs and is about 3 % of the human genome. Angelman and Prader-Willi
	syndromes are associated with loss of function or deletion of genes in the 15q11-q13 region. In
	the case of Angelman syndrome, this loss is due to inactivity of the maternal 15q11-q13
	encoded UBE3A gene in the brain by either chromosomal deletion or mutation. In cases of
	Prader-Willi syndrome, there is a partial or complete deletion of this region from the paternal
	copy of chromosome 15. Tay-Sachs disease is a lethal disorder associated with mutations of
	the HEXA gene, which is encoded by chromosome 15. Marfan syndrome is associated with
	chromosome 15 through the FBN1 gene. The FAM98 gene product has been provisionally
	designated FAM98 pending further characterization.
Gene ID:	25940
Pathways:	SARS-CoV-2 Protein Interactome
