## Target Details

Background:	<p>Synonyms: Adhesion molecule with Ig like domain 1, ali2, Alivin 2, AMIGO 1, AMIGO, AMIGO protein, Amphoterin induced gene and ORF Amigo, Amphoterin induced gene and ORF, Amphoterin induced protein 1, KIAA1163, AMGO1_HUMAN.</p> <p>Background: The amphoterin-induced gene and ORF (AMIGO) family of proteins consists of AMIGO-1, AMIGO-2 and AMIGO-3. All three members are single pass type I membrane proteins that contain several leucine-rich repeats, one IgG domain, and a transmembrane domain. The AMIGO proteins are specifically expressed on fiber tracts of neuronal tissues and participate in their formation. The AMIGO proteins can form complexes with each other, but can also bind itself. AMIGO-1, also designated Alivin-2, promotes growth and fasciculation of neurites and plays a role in myelination and fasciculation of developing neural axons. In cerebellar neurons, AMIGO-2 (Alivin-1) is crucial for depolarization-dependent survival. Similar to AMIGO-1 and AMIGO-2, AMIGO-3 (Alivin-3) plays a role in homophilic and/or heterophilic cell-cell interaction and signal transduction.</p>
