Neurotrimin/HNT (NTM Products)

Target Details		
Background:	Synonyms: hNT, IgLON family member 2, IGLON2, Neurotrimin, NT antibody NTM, NTRI_HUMAN.	
	Background: Cell adhesion molecules (CAMs) influence cell growth, differentiation,	
	embryogenesis, immune response and cancer metastasis by networking information from the	
	extracellular matrix to the cell. The four major families of cell adhesion molecules are	
	immunoglobulin (Ig) superfamily (calcium-independent transmembrane glycoproteins),	
	integrins (transmembrane non-covalently linked heterodimers of Alpha and Beta subunits),	
	calcium-dependent cadherins and divalent cation-dependent selectins. Regulation of neuronal	
	synaptic adhesion by CAMs has proven important for learning and memory. Proper embryonic	
	morphogenic development is also heavily dependent on the regulation of cell adhesion	
	molecules. Neurotrimin (hNT) is a neural cell adhesion molecule localizing to the cell	
	membrane, where it acts as a lipid-anchor. Neurotrimin belongs to the IgLON family of proteins,	
	a member of the larger immunoglobulin superfamily.
