Target Details

Background:	Synonyms: SOX4, SOX 4, SOX-4, Ecotropic viral integration site 16, EVI 16, EVI16, SRY sex
	determining region Y box 4, SRY box containing gene 4, SRY related HMG box gene 4.
	Background: Sox genes comprise a family of genes that are related to the mammalian sex-
	determining gene SRY. These genes similarly contain sequences that encode for the HMG-box
	domain, which is responsible for the sequence-specific DNA-binding activity. Sox genes encode
	putative transcriptional regulators implicated in the decision of cell fates during development
	and the control of diverse developmental processes. The highly complex group of Sox genes
	cluster at least 40 different loci that rapidly diverged in various animal lineages. At present, 30
	Sox genes have been identified. Members of this family have been shown to be conserved
	during evolution and to play key roles during animal development. Some are involved in human
	diseases, including sex reversal.
