Background:	Synonyms: cAMP responsive element binding protein 3 like 3, cAMP responsive element-
	binding protein 3 like protein 3, CREB H, CREB/ATF family transcription factor, CREBH, Cyclic
	AMP responsive element binding protein 3 like protein 3, cAMP-responsive element-binding
	protein 3-like protein 3, HYST1481, MGC126553, MGC126557, Transcription factor CREB H, CR3L3_HUMAN.
	Background: CREB3L3 is a 461 amino acid single-pass type II membrane protein that localizes
	to the endoplasmic reticulum (ER) and, in response to ER stress, is cleaved and translocated to
	the nucleus. Expressed exclusively in liver, CREB3L3 functions as a transcription factor that,
	during ER stress, is thought to activate genes that are involved in both the unfolded protein
	response and the acute phase response (APR). Additionally, CREB3L3 is underexpressed in
	hepatocellular carcinoma, suggesting a possible role as a tumor suppressor. CREB3L3
	functions as a dimer and contains one leucine zipper domain, a KDEL-like sequence and a bZIP
	domain, through which it conveys its DNA binding ability. Three isoforms of CREB3L3 exist due
	to alternative splicing events.
