	rich 4 Pre mRNA splicing factor SRP75.
	Background: Members of the transforming growth factor-beta (TGF-Beta) superfamily play
	critical roles in controlling cell growth and differentiation. Effects of TGF-Beta family ligands are
	mediated by Smad proteins. The Smad nuclear interacting protein (SNIP1) contains a forkhead-
	associated (FHA) domain and acts as a nuclear inhibitor of CBP/p300. SNIP1 potently inhibits
	the activity of NF-kappa B, which binds the C/H1 domain of CBP/p300, by competing for the
	binding site. SNIP1 is also thought to induce expression of Cyclin D1 to promote cellular
	proliferation. SNIP1 is ubiquitously expressed with high expression in heart and skeletal muscle.
