## Target Details

Background:	<p>Synonyms: Alc, Alcadein, Alcadein Gamma, Alcagamma, Alzheimer's disease related cadherin like protein, Calsyntenin 2, CLSTN 2, CS 2, CS2, FLJ39113, FLJ39499, MGC119560, CSTN2_HUMAN.</p> <p>Background: Members of the calsyntenin protein family are localized to the post-synaptic membrane of excitatory central nervous system (CNS) synapses. Calsyntenin-2, also known as Alcadein-gamma, is a 955 amino acid protein that localizes to the endoplasmic reticulum, golgi apparatus and plasma membranes. Containing 2 cadherin-like repeats in its N-terminal extracellular region, calsyntenin-2 binds synaptic calcium with its cytoplasmic domain, suggesting a role in the modulation of calcium-mediated postsynaptic signals. Under normal physiological conditions, calsyntenin-2 is proteolytically processed in an event in which the primary zeta-cleavage generates a short C-terminal transmembrane fragment and a long extracellular N-terminal domain.</p>
