## Target Details

AASD-PPT, AASDHPPT, ADPPT\_HUMAN, Alpha amino adipic semialdehyde dehydrogenase phosphopantetheinyl transferase, Alpha-amino adipic semialdehyde dehydrogenase-phosphopantetheinyl transferase, CGI 80, CGI80, CGI-80, HAH P, L-amino adipate-semialdehyde dehydrogenase-phosphopantetheinyl transferase, LYS2, LYS5, LYS5 ortholog.

Background: AASDHPPT (amino adipate-semialdehyde dehydrogenase-phosphopantetheinyl transferase), also known as LYS2, LYS5 or CGI-80, is a 309 amino acid protein that localizes to the cytoplasm and belongs to the P-Pant transferase superfamily. Expressed in testis, liver, kidney, heart, brain, placenta and skeletal muscle, AASDHPPT exists as a monomer that functions to catalyze the phosphopantetheine-dependent post-translational modification of target proteins, effectively transferring a 4'-phosphopantetheine moiety from coenzyme A (CoA) to a serine residue of an acceptor protein. AASDHPPT is subject to DNA damage-dependent phosphorylation, probably by ATM or ATR. The gene encoding AASDHPPT maps to human chromosome 11, which houses over 1,400 genes and comprises nearly 4 % of the human genome.
