## Target Details

Background:	Synonyms: SRG1, Synaptotagmin 12, Synaptotagmin XII, Synaptotagmin-12, Syt12,
	SYT12_HUMAN, SytXII.
	Background: This gene is a member of the synaptotagmin gene family and encodes a protein
	similar to other family members that mediate calcium-dependent regulation of membrane
	trafficking in synaptic transmission. Studies of the orthologous gene in rat have shown that the
	encoded protein selectively modulates spontaneous synaptic-vesicle exocytosis and may also
	be involved in regulating calcium independent secretion in nonneuronal cells. Alternative
	splicing results in multiple transcript variants. The gene has previously been referred to as
	synaptotagmin XI but has been renamed synaptotagmin XII to be standard with mouse and rat
	official nomenclature.
