Background:	Synonyms: ACTH receptor, ACTH-R, ACTHR, ACTHR_HUMAN, Adrenocorticotrophic hormone

Target Details

receptor, Adrenocorticotropin receptor, MC2-R, MC2R, Melanocortin 2 receptor, Melanocortin receptor 2.

Background: MC2R encodes one member of the five-member G-protein associated melanocortin receptor family. Melanocortins (melanocyte-stimulating hormones and adrenocorticotrophic hormone) are peptides derived from pro-opiomelanocortin (POMC). MC2R is selectively activated by adrenocorticotrophic hormone, whereas the other four melanocortin receptors recognize a variety of melanocortin ligands. Mutations in MC2R can result in familial glucocorticoid deficiency.
