kinase substrate, TSKS, TSKS1, MGC134104, TSKS_HUMAN.
Background: TSKS is a 592 amino acid protein that is highly expressed in human testicular
tissue. Low levels of TSKS are detectable in prostate, placenta, fetal liver, thymus, and
mammary gland tissues. TSKS is found to be downregulated in cancerous testicular tissue
from seminoma, teratocarcinoma, embryonal and Leydig cell tumors concurrently with high
expression in neighboring premalignant carcinoma. TSKS protein contains an N-terminal signal
peptide, but does not contain a transmembrane region. TSKS has many potential
phosphorylation and glycosylation sites and is phosphorylated by soluble recombinant TSSK2
in vitro. It is thought that TSKS likely plays a physiological role in spermatogenesis or
spermiogenesis.
