coupled receptor FM-4, G-protein coupled receptor TGR-1, Neuromedin U receptor 2,
Neuromedin-U receptor 2, NMU R2, NMU-R2, NMU2R, NMUR2, NMUR2_HUMAN, TGR1
Background: Neuromedin U is a neuropeptide with high activity on smooth muscle. It is widely
expressed in gastrointestinal systems and central nervous system (CNS). Peripheral activities
of neuromedin U include smooth muscle stimulation, ion transport alterations in the gut and the
regulation of local blood flow and adrenocortical function. Neuromedin U receptors 1 and 2 $$
(NMUR1 and NMUR2) are multi-pass membrane proteins that belong to the G-protein coupled
receptor 1 family of proteins. Both NMUR1 and NMUR2 act as receptors for the neuromedin U
neuropeptide. NMUR1 is detected in peripheral organs, particularly in urogenital and
gastrointestinal systems, with highest levels in testis. It?s expression in CNS is low, but the
protein has been detected in cerebellum, hippocampus, dorsal root ganglia and spinal cord.
NMUR2 is predominantly detected in central nervous system with highest levels detected in
medulla oblongata, spinal cord and thalamus. It may also be detected in testis but has low
levels of expression in peripheral tissues.
