Background:	Synonyms: CHD2, CHD2-42, CHD2-52, Down syndrome cell adhesion molecule, DSCAM	
	Background: Cell adhesion molecule that plays a role in neuronal self-avoidance. Promotes	
	repulsion between specific neuronal processes of either the same cell or the same subtype of	
	cells. Mediates within retinal amacrine and ganglion cell subtypes both isoneuronal self-	
	avoidance for creating an orderly dendritic arborization and heteroneuronal self-avoidance to	
	maintain the mosaic spacing between amacrine and ganglion cell bodies. Receptor for netrin	
required for axon guidance independently of and in collaboration with the recepto		
	spinal chord development plays a role in guiding commissural axons projection and pathfinding	
across the ventral midline to reach the floor plate upon ligand binding. Enhances		
	phosphorylation of PAK1 and FYN. Mediates intracellular signaling by stimulating the activation	
	of MAPK8 and MAP kinase p38.	
Gene ID:	1826	
UniProt:	O60469	

Pathways: Regulation of Cell Size
