| | Background: Probable regulator of the Hippo/SWH (Sav/Wts/Hpo) signaling pathway, a |
| | signaling pathway that plays a pivotal role in tumor suppression by restricting proliferation and |
| | promoting apoptosis. Along with NF2 can synergistically induce the phosphorylation of LATS1 |
| | and LATS2 and can probably function in the regulation of the Hippo/SWH (Sav/Wts/Hpo) |
| | signaling pathway. Acts as a transcriptional coactivator of ESR1 which plays an essential role in |
| | DYNLL1-mediated ESR1 transactivation. Regulates collagen-stimulated activation of the |
| | ERK/MAPK cascade. Modulates directional migration of podocytes. Acts as a substrate for |
| | PRKCZ. Plays a role in cognition and memory performance. |
