Background:	Synonyms: HPE 5, HPE5, Odd paired homolog Drosophila, Zic 2, Zic family member 2 odd paired Drosophila homolog, Zic family member 2, ZIC2, ZIC2_HUMAN, Zinc finger protein of the cerebellum 2, Zinc finger protein ZIC 2, Zinc finger protein Zic2. Background: Zic2 is a C2H2 zinc finger transcription factor that influences forebrain development. Zic2 is a transcriptional repressor and may regulate tissue specific expression of dopamine receptor D1. Zic2 transcript is abundant in the dorsal neural tube/spinal cord, and in the hindbrain. A polyhistidine tract polymorphism in this gene may be associated with increased risk of neural tube defects. This gene is closely linked to a gene encoding zinc finger protein of the cerebellum 5, a related family member on chromosome 13.
