Target Details

Background:	<p>Synonyms: O10J3_HUMAN, Olfactory receptor 10J3, Olfactory receptor family 10 subfamily J member 3, Olfactory receptor family 10 subfamily J member 3 pseudogene, Olfactory receptor OR1 25 pseudogene, OR1 25, OR10J3, OR10J3P.</p> <p>Background: Olfactory receptors are G protein-coupled receptors that localize to the cilia of olfactory sensory neurons where they display affinity for and bind to a variety of odor molecules. The genes encoding olfactory receptors comprise the largest family in the human genome. The binding of olfactory receptor proteins to odor molecules triggers a signal transduction that propagates nerve impulses throughout the body, ultimately leading to transmission of the signal to the brain and the subsequent perception of smell. OR10J3 (olfactory receptor 10J3) is a 329 amino acid protein. The gene encoding OR10J3 maps to human chromosome 1.</p>
