## Target Details

Background:	Synonyms: BR STL 1, Brain sulfotransferase like protein, Brain sulphotransferase like, BRSTL1,
	hBR STL 1, hBR STL, Nervous system cytosolic sulfotransferase, Nervous system
	sulfotransferase, NST, Sulfotransferase 4A1, Sulfotransferase family 4A member 1,
	Sulfotransferase related protein, SULTX3, ST4A1_HUMAN.
	Background: Sulfation is an essential conjugation reaction that increases the water solubility of
	many compounds, thereby influencing their renal excretion and also resulting in the formation
	of active metabolites. SULT4A1 (sulfotransferase family 4A, member 1), whose alternative
	names include brain sulfotransferase-like protein, nervous system sulfotransferase, NST,
	SULTX3, hBR-STL-1, BRSTL1, BR-STL-1, MGC40032 and DJ388M5.3, is a 284 amino acid
	protein showing cytoplasmic localization. As a member of the sulfotransferase 1 family,
	SULT4A1 plays a role in elimination of xenobiotics, activation of procarcinogens and regulation
	of hormones. SULT4A1 is highly expressed in cerebral cortex and frontal lobe, with lower
	expression in cerebellum, temporal and occipital lobes. Two SULT4A1 isoforms exist to
	alternative splicing events. The gene encoding SULT4A1 maps to human chromosome
	22q13.2, a region which has been implicated in predisposition to schizophrenia.
