Target Details	
Background:	Synonyms: Ataxin 10, Ataxin-10, ATX10_HUMAN, Atxn10, Brain protein E46 homolog, E46L,
	FLJ37990, HUMEEP, Like mouse brain protein E46, SCA10, Spinocerebellar ataxia 10,
	Spinocerebellar ataxia type 10 protein.
	Background: Spinocerebellar ataxia (SCA) is an autosomal dominant neurodegenerative
	disorder characterized by ataxia and selective neuronal cell loss. SCA is caused by the
	expansion of a translated CAG repeat, encoding a polyglutamine tract in SCA gene products,
	known as ataxins. The ataxin proteins are ubiquitously expressed in nervous tissue, but are
	primarily detected in cerebellum, brain stem and spinal cord in the central nervous system.
	Ataxin-10 is a cytoplasmic protein that belongs to the family of armadillo repeat proteins. A loss
	of ataxin-10 in primary neuronal cells causes increased apoptosis of cerebellar neurons. Ataxin-
	10 interacts with p110, an O-Linked beta-N-acetylglucosamine transferase, and may be
	important in the regulation of intracellular glycosylation levels and homeostasis in the brain.
	Spinocerebellar ataxia type 10 (SCA10) is an autosomal dominant disorder that causes
	cerebellar ataxia and seizures. SCA10 is caused by an expansion of an ATTCT pentanucleotide
	repeat in intron 9 of the ataxin-10 gene.
