Target Details

Background:	Synonyms: CSAD, CSAD_HUMAN, CSD, Cysteine sulfinic acid decarboxylase, Cysteine-sulfinate
	decarboxylase, Sulfinoalanine decarboxylase.
	Background: CSAD is a 493 amino acid protein that exists as a homodimer and belongs to the
	group II decarboxylase family. CSAD catalyzes the conversion of 3-sulfino-L-alanine to
	hypotaurine and carbon dioxide, binds pyridoxal phosphate as a cofactor and undergoes
	alternative splicing to produce three isoforms. The gene encoding CSAD maps to human
	chromosome 12, which encodes over 1,100 genes and comprises approximately 4.5 % of the
	human genome. Chromosome 12 is associated with a variety of diseases and afflictions,
	including hypochondrogenesis, achondrogenesis, Kniest dysplasia, Noonan syndrome and
	trisomy 12p, which causes facial developmental defects and seizure disorders.
