| | Background: RPGRIP1L is a 1,315 amino acid protein that belongs to the RPGRIP1 family and is |
| | thought to function in programmed cell death, craniofacial development and formation of the |
| | left-right axis. Existing as two alternatively spliced isoforms that localize to the cytoplasm, |
| | cytoskeleton, centrosome and cilium basal body, RPGRIP1L interacts with nephrocystin-4 and |
| | is moderately expressed in brain, retina and kidney. Containing two C2 domains, RPGRIP1L is |
| | encoded by a gene that maps to human chromosome 16q12.2. Defects in the gene encoding |
| | RPGRIP1L are the cause of Joubert syndrome type 7 (JBTS7), COACH syndrome (COACHS) |
| | and Meckel syndrome type 5 (MKS5). |
| Pathways: | DNA Replication, Regulation of G-Protein Coupled Receptor Protein Signaling, Synthesis of DNA |
