| Alternative Name: | TXLNB (TXLNB Products) |
| Background: | Synonyms: MDP77, LST001, C6orf198, dJ522B19.2, Beta-taxilin, Muscle-derived protein 77, hMDP77, TXLNB |
| | Background: Beta-taxilin promotes nerve regeneration and may be involved in intracellular |
| | vesicle transport. Expressed predominantly in cardiac and skeletal muscle, beta-taxilin binds to |
| | the coiled coil region of the syntaxin family members STX1A, STX3A, and STX4A. Beta- and |
| | gamma-taxilins, bind to the alpha subunit of the nascent polypeptide-associated complex |
| | (NAC) and affect its nuclear distribution, suggesting that the taxilin family is involved not only in |
| | the translational process through its interaction with NAC but also in the transcriptional process |
| | through its interaction with alphaNAC alone. |
