OTTHUMP00000201478, OTTHUMP00000201479, Potassium voltage gated channel subfamily G member 3, Potassium voltage-gated channel subfamily G member 3, Voltage gated potassium channel 6.3, Voltage gated potassium channel Kv10.1, Voltage gated potassium channel subunit Kv10.1, Voltage gated potassium channel subunit Kv6.3, Voltage gated potassium channel subunit Kv6.4, Voltage-gated potassium channel subunit Kv10.1, Voltage-gated potassium channel subunit Kv6.3.

Background: Voltage-gated potassium (Kv) channels represent the most complex class of voltage-gated ion channels from both functional and structural standpoints. Their diverse functions include regulating neurotransmitter release, heart rate, insulin secretion, neuronal excitability, epithelial electrolyte transport, smooth muscle contraction, and cell volume. This gene encodes a member of the potassium channel, voltage-gated, subfamily G. This member is a gamma subunit functioning as a modulatory molecule. Alternative splicing results in two transcript variants encoding distinct isoforms. [provided by RefSeq, Jul 2008].
