## Datasheet for ABIN1397319 anti-C1orf63 antibody (AA 4-100) (Biotin)

Overview

| Quantity:            | 100 µL   |  |
|----------------------|--|--|
| Target:              | C1orf63  |  |
| Binding Specificity: | AA 4-100   |  |
| Reactivity:          | Rat  |  |
| Host:                | Rabbit   |  |
| Clonality:           | Polyclonal   |  |
| Conjugate:           | This C1orf63 antibody is conjugated to Biotin  |  |
| Application:         | ELISA, Immunohistochemistry (Frozen Sections) (IHC (fro)), Immunohistochemistry (Paraffin-<br>embedded Sections) (IHC (p)) |  |

## Product Details

| Immunogen:            | KLH conjugated synthetic peptide derived from human NPD014 |  |
|-----------------------|--|--|
| lsotype:              | lgG  |  |
| Cross-Reactivity:     | Rat  |  |
| Predicted Reactivity: | Human,Mouse  |  |
| Purification:         | Purified by Protein A.                                     |  |
| Target Details        |  |  |
| Target:               | C1orf63  |  |

| l arget:          | CTOFF63                   |
|-------------------|---------------------------|
| Alternative Name: | NPD014 (C1orf63 Products) |

| Target Details      |  |  |
|---------------------|--|--|
| Background:         | Synonyms: NPD014, C1orf63, DJ465N24.2.1, Arginine/serine-rich protein 1, RSRP1, HT033                              |  |
|                     | Background: Chromosome 1 is the largest human chromosome spanning about 260 million                                |  |
|                     | base pairs and making up 8 % of the human genome. There are about 3,000 genes on                                   |  |
|                     | chromosome 1, and considering the great number of genes there are also a large number of                           |  |
|                     | diseases associated with chromosome 1. Notably, the rare aging disease Hutchinson-Gilford                          |  |
|                     | progeria is associated with the LMNA gene which encodes lamin A. When defective, the LMNA                          |  |
|                     | gene product can build up in the nucleus and cause characteristic nuclear blebs. The                               |  |
|                     | mechanism of rapidly enhanced aging is unclear and is a topic of continuing exploration. The                       |  |
|                     | MUTYH gene is located on chromosome 1 and is partially responsible for familial adenomatous                        |  |
|                     | polyposis. Stickler syndrome, Parkinsons, Gaucher disease and Usher syndrome are also                              |  |
|                     | associated with chromosome 1. A breakpoint has been identified in 1q which disrupts the                            |  |
|                     | DISC1 gene and is linked to schizophrenia. Aberrations in chromosome 1 are found in a variety                      |  |
|                     | of cancers including head and neck cancer, malignant melanoma and multiple myeloma. The                            |  |
|                     | C1orf63 gene product has been provisionally designated C1orf63 pending further                                     |  |
|                     | characterization.  |  |
| Gene ID:            | 57035  |  |
| UniProt:            | Q9BUV0   |  |
| Application Details |  |  |
| Application Notes:  | IHC-P 1:200-400  |  |
|                     | IHC-F 1:100-500  |  |
| Restrictions:       | For Research Use only  |  |
| Handling            |  |  |
| Format:             | Liquid   |  |
| Concentration:      | 1 µg/µL  |  |
| Buffer:             | Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and                       |  |
|                     | 50 % Glycerol.   |  |
| Preservative:       | ProClin  |  |
| Precaution of Use:  | This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only. |  |
| Storage:            | -20 °C   |  |
|                     |  |  |
