Target Details	
Background:	Synonyms: APE, GIV, GRDN, HkRP1, GIRDIN, KIAA1212, Akt phosphorylation enhancer, Coiled-
	coil domain-containing protein 88A, G alpha-interacting vesicle-associated protein, Girders of
	actin filament, Hook-related protein 1, CCDC88A
	Background: Plays a role as a key modulator of the AKT-mTOR signaling pathway controlling
	the tempo of the process of newborn neurons integration during adult neurogenesis, including
	correct neuron positioning, dendritic development and synapse formation. Enhances
	phosphoinositide 3-kinase (PI3K)-dependent phosphorylation and kinase activity of AKT1/PKB,
	but does not possess kinase activity itself. Phosphorylation of AKT1/PKB thereby induces the
	phosphorylation of downstream effectors GSK3 and FOX01/FKHR, and regulates DNA
	replication and cell proliferation (By similarity). Essential for the integrity of the actin
	cytoskeleton and for cell migration. Required for formation of actin stress fibers and
	lamellipodia. May be involved in membrane sorting in the early endosome.
