Background:	<p>Synonyms: Ddx32, DEAD/H Asp-Glu-Ala-Asp/His box polypeptide 32, DEAD/H box 32, DEAD/H helicase like protein 1, DEAH Asp-Glu-Ala-His box polypeptide 32, DEAH box protein 32, DHLP1, DHX32, Helicase DDX32, HuDDX32, Putative pre-mRNA-splicing factor ATP-dependent RNA helicase DHX32, DHX32_HUMAN.</p> <p>Background: DEAD-box proteins, characterized by the conserved motif Asp-Glu-Ala-Asp, are putative RNA helicases implicated in several cellular processes involving modifications of RNA secondary structure and ribosome/spliceosome assembly. Based on their distribution patterns, some members of this family may be involved in embryogenesis, spermatogenesis, and cellular growth and division. DDX32 is a 743 amino acid nuclear protein that localizes to the mitochondria and is a member of the DEAD box helicase family. Expressed in various tissues, DDX32 is up-regulated by ionomycin in T lymphocytes and down-regulated in acute lymphoblastic leukemia. Considered a novel RNA helicase, DDX32 may play an important role in the development of colorectal cancer and may be involved in regulating T-cell response to certain apoptotic stimuli.</p>
